Rensselaer Faculty and Staff Workshop: Beta Classroom – Use Case Session

The Beta Classroom has been in use for almost one year. We have had several faculty come in to test out some of the technologies to assist in achieving their learning objectives and to promote student engagement in the classroom.

We are excited to have some of the faculty who have successfully utilized Beta Classroom technologies come together and discuss with you how they have tested out the technology and how it has been supportive to collaborative student learning. Faculty members participating in the session include:

Dean Nieusma
School of Humanities, Arts and Social Sciences
Dean will showcase an effective use of the Wireless ClickShare Barco system and display unit to engage students in collaborating with their CAD designs.

Michael Hughes
School of Engineering
Michael will discuss how he has been using one of the large touch display units along with Adobe Connect to connect with his remote students.

Rhett Russo
School of Architecture
Rhett has been using one of the large touch display units to review 3-D designs with his students using Rhino software.

Come and learn about how these technologies have been tested and implemented by your colleagues to enhance student learning. This will be a great opportunity for you to formulate some of your own ideas on how to implement collaborative technology in your classes.

This workshop will be held on Friday, March 24th from 10:00 am - 11:00 am in the Beta Classroom located on the first floor of the Library. Please bring a laptop or mobile device.

Please register by Monday, March 20th. Space is limited.
