MOTIVATION AND ACTIVE LEARNING: STUDENTS AS TEACHERS

This article published on eSchool News discusses strategies to keep students motivated when challenged with a difficult task through active learning, presenting an activity where students are able to do so by teaching each other.

The author suggests the following dynamic:

1. **Identify the problem and find a solution:**
   Students identify a part of the assignment they are having trouble with and work with groups to find a solution for it.

2. **Document the steps to the solution:**
   Students record a detailed account of their strategies to solve the issue.

3. **Make a tutorial to share with others:**
   Students make a video, screencast or tutorial to share their solution to the issue to their peers.

The article focuses on a high-school level introductory programming class, but its core message can be applied to all subjects and grade levels.
