LEARNING NEWSFLASH

Innovative Strategies and Tools to Enrich Knowledge

INFORMATION TECHNOLOGY AND UNDERGRADUATE STUDENTS – 2019 EDUCAUSE REPORT

EDUCAUSE

EDUCAUSE conducted a study in 2019 with undergraduate students and information technology across 118 US institutions. There are interesting key findings on learning environments, face-to-face activities, tools, technology experiences, and accessibility. These findings fit well with the teaching and learning directions we are moving more towards within our own classrooms on campus. Our goal is to structure our classrooms to support lecture as well as collaboration and active learning activities. We are also excited to have our newest Active Learning Classroom in the Sage building with planning for additional classrooms. The ideas for our Active Learning Classrooms have come directly from the work and testing of the technologies in the Beta Classroom along with our partnership with MultiMedia Services.
