Innovative Strategies and Tools to Enrich Knowledge

### Educational Opportunities: TLC Webinar Reminder and Gameful and Embodied Learning Symposium

#### New Models of Lifelong Learning for the Global Digital Economy by Christopher Dede – 4/27/23

The Teaching and Learning Collaboratory is pleased to announce the 2023 Spring Webinar Session. We are very excited to welcome our guest speaker, [Christopher Dede](#), who is a Senior Research Fellow at Harvard's Graduate School of Education. The session will look at how we and our children face a world-wide interdependent civilization shaped by economic turbulence from artificial intelligence and globalization, climate change, and advanced social and immersive media. Higher/continuing educators are faced with the challenge of preparing young people—and current workers—for unceasing reinvention to take on many roles in the workplace, as well as for careers that do not yet exist. This presentation will focus on The Sixty Year Curriculum initiative, which centers on the least understood aspect of this challenge: What are the organizational and societal mechanisms by which people can reskill both through higher/continuing education and later in their lives, when they do not have the time or resources for a full-time academic experience that results in a degree or certificate? There will be a little time at the end for questions and answers. Additional information is listed below along with the link to register for the event. We look forward to seeing you there!

## Gameful and Immersive Learning Symposium – 5/15/23 and 5/16/23

The Gameful and Immersive Learning Symposium presents innovative methods and technologies for teaching such as reward systems that encourage engagement, adaptive content that personalizes learning for individual students, and human-scale immersive environments that place students within the material's authentic contexts. Using combinations of these can create impactful educational experiences. This two-day symposium offers invited talks by field experts, panel discussions with Rensselaer community members, and workshops for creating, curating, and facilitating these types of learning experiences. Symposium events are held in both the theatre and in Studio 2, where the immersive panoramic screen is installed.

*This work is supported by the Rensselaer Provost Office for Undergraduate Education and is free and open to Rensselaer faculty and staff.*
