The NSF’s Division of Undergraduate Education has released a call for proposals on Improving Undergraduate STEM Education: Education and Human Resources (IUSE:EHR).

The goal of the IUSE:EHR Program is to “catalyze colleges and universities and their faculties to provide highly effective, evidence-based teaching and learning experiences for their undergraduate students taking STEM courses”.

The program supports projects on two tracks: “Exploration and Design” and “Development and Implementation”. Both tracks support research and development of innovating learning resources, faculty development projects, and strategies to implement effective instruction in a department, among others.

Further information, including how to apply, information is available at the following link: [IUSE: EHR Program](#)
